CONTENTS

Volume I

La métallurgie des poudres. Présent et futur M. Eudier et H. Pastor.....	XXIII
Powder Metallurgy. Present and Future M. Eudier and H. Pastor.....	XXXI
Structural Applications	
Powder metallurgy for aerospace applications W.A. Kaysser.....	3
Qu'attend l'industrie automobile à l'avenir, de la métallurgie des poudres C. Delarche.....	11
Sintered compound parts for automotive applications D. Gonja and V. Manolache	19
Automated manufacturing line for PM automotive components A. Abad, N. Martínez, D. Nöbel and M.A. Castaños.....	23
Composite camshafts: new developments P. Blanchard.....	27
Material development and fitting technique for an assembled camshaft H. Cohrt, M. Enders, K. Klaas and K. Kaehler.....	31
Finite element analysis of a PM main bearing cap A. Romero, X. Ayneto and R. Lázaro.....	35
Single-sintered PM' connecting rods for passenger cars - an illusion ? K. Richter, E. Hoffmann, K. Lipp and C.M. Sonsino.....	39
Comparison of conventionally manufactured gears with PM'gears manufactured in single or double sinter process - technical and economical aspects N. Dautzenberg, K.-H. Lindner and R. Strehl.....	43
PM parts - a look into the future G.F. Bocchini.....	47
High density PM materials for future applications U. Engström.....	57
Evolution of PM trochoidal rotor pump set Y. Takeda, T. Kosuge and K. Kondoh.....	65
Economical PM parts by applying joining techniques H.P. Koch and D. Pohl.....	69

General Applications

Développement de la métallurgie des poudres en Roumanie H. Colan.....	77
Critical analysis of the perspectives of further development of powder metallurgy at the enterprises of the Ukrainian Ministry of Industry Yu. Ternovoy, I. Kondratov, S. Bogun, V. Katunin, V. Belogub and V. Vdovenk.....	81
Threats to P/M: an analysis of competitive technologies C.J. Kasouf, D.C. Zenger, P.U. Gummeson and D. Apelian.....	85
Organizational learning: lessons for P/M in competitive supplier markets C.J. Kasouf, A. Gerstenfeld and M.B. Elmes.....	89

Hard Materials

Some observations on the milling characteristics of hardmetal powders Z. Alpugan and T. Baykara.....	95
Intercarbide surface is the main obstacle to increase fracture toughness and strength of hardmetals A. Laptev.....	103
Heat treatment as an economic process of improving the operating properties of cemented carbides tools M. Szutkowska.....	107
Introduction and short history of recycling of tungsten carbide waste in the Czech Republic V. Reich.....	111
The effect of TiN (PVD) coating on the diffusion wear of hardmetals S. Novak and M. Komac.....	115
Plasma enhanced MO-CVD of Ti(O,C,N) on cemented carbides V. Ruxandra, Z. Simona, T. Roxana and Z. Raluca.....	119
The study of coating of sintered carbides A. Durisinová and J. Diblík.....	123
The influence of small boron additions on the sintering behaviour of cemented carbides A. Micski and B. Uhrenius.....	127
Hard and binder phase substitution in wc-10Co cemented carbides G.S. Upadhyaya, S.K. Bhaumik and M.L. Vaidya.....	131
Structure and properties of WC hardmetals with alternate binders E.S. Chernikova and A.V. Laptev.....	137
Compressibility of WC-Co powder mixtures C. Colin, N. Favrot, F. Li, G. Barbier and F. Delannay.....	141
Processing and tribologic behaviour of functional gradient WC-Co cermets N. Favrot, C. Colin, J. Besson, G. Barbier and F. Delannay.....	147
Extruder twisting processes for internal cooling channels in carbide rods K. Friedrichs.....	153

Several important features of structure development at various stages of hardmetal production and their influence on the properties of sintered products K.S. Cherniavsky.....	157
The effect of grain growth inhibitor on the densification of nanophase tungsten carbide cobalt B.K. Kim, G.H. Ha, J.H. Lee and W.J. Lee.....	161
(V,W)C-based hardmetal and its resistance to wear and erosion S. Luyckx.....	169
Indentation fracture toughness of WC-Co cemented carbides M. Szutkowska.....	173
Cobalt in hard metal B. Clark.....	179
High temperature oxidation of hard alloy of TiC-Ni-Cr system in the temperature range of 600-1200 °C V.B. Voitovich, E.I. Golovko, V.A. Tsyban, R.F. Voitovich and L.N. Beloborodov.....	187
TEM observation and EDX analysis of the surrounding structure in TiC, Ti(C,N) based ceramic-metal W. Xiong, Y. Zheng, X. Zhao, Z. Hu and K. Cui.....	191
Synthesis of the (W,Ti,Nb) (C,N) nitrocarbide W. Missol, T. Karwata, H. Baildon and J. Bujok.....	195
Centrifugal atomizers of carbide composites for steam boilers and gas turbines L. Valdma and T. Talving.....	199
Contribution to the existence of an ultrahard phase in the system TiC-Sc ₂ O ₃ V. Brozek and V. Dufek.....	203
Fused tungsten carbide properties control in the course of its elaboration R. Orban.....	207
Stable and metastable equilibrium phases in a W-C system M.O. Cojocar, E. Florian, C. Ghizdeanu and D. Cojocar.....	211
The investigation of borocarbide method of obtaining of the TiB ₂ powder Yu.V. Lewinsky and A.P. Petrov.....	215
Study of high-energy ball-milling and postannealing of B-W elemental powder mixtures M. Stubicar, A. Tonejc, N. Stubicar, K. Coric, C. Kosanovic and I. Jeren.....	219
Preparation and characterization of iron-iron boride cermets A. Casagrande, G. Palombarini and G. Sambogna.....	223
Development of ternary boride base cermets K.I. Takagi, M. Komai and S. Matsuo.....	227
Investigation of metal binders for diamond instruments, obtained through hot pressing D. Kolarov and M. Gencheva.....	235
Diamond thin films: role of the substrate for controlling the nucleation step G. Demazeau, D. Michau and B. Tanguy.....	239
Sintered materials based on the hexagonal and cubic boron nitride P. Georgeoni, E. Ganescu, M. Fecioru and V. Copaciu.....	247

Sintered material which replaces the synthetic diamond used to rectify and to profile the abrasive disk D. Axinte, V. Munteanu, A. Epureanu and V. Paunoiu.....	251
Sintered composite material based on granit resisting to the long action of the acids D. Axinte, V. Paunoiu, V. Munteanu and M. Anghel.....	255
Cubic boron nitride: a so-call "superhard materials" for many potential applications G. Demazeau, V. Gonnet and L. Boutinaud-Vel.....	259
The diamond powder with metal-coating particles for diamond-metal composites and tool Yu.V. Naidich.....	267
Influence of metal addition methods on diamond compacts properties L. Jaworska and T. Gibas.....	275
Powders	
Preparation of finely divided metal powders from solutions F. Fievet, J.-P. Lagier and M. Figlarz.....	281
Characterization and reactivity of a nitrogen atomized 304L stainless steel powder P. Bracconi, G. Sornay-Gasc and A. Muggeo.....	291
Considerations about recycling of copper slurries G. Ernszt and G. Petre.....	295
Microstructural aspects in high chromium white iron powders application M. Sittner.....	299
Hydride-dehydride conversion of the compact Ti_6Al_4V to PM powder M. Mitkov and D. Bozic.....	303
Numerical simulation of gas and water atomization B. Sustarsic.....	307
Innovative powder processing methods for super clean, ceramic-free metal powder M. Hohmann.....	311
Process modelling for gas atomization of liquid metal jets E. von Berg, M. Bürger, S.H. Cho and A. Schatz.....	315
The role of gas flow conductance in metal powder degassing T. Tunberg and L. Nyborg.....	321
New technological feasibilities of properties control of water- and gas atomized powders Yu.F. Ternovoy, S.V. Bogun, V. Katunin and V. Vdovenko.....	325
Synthesis of Cu-Mo powders for mechanical alloying O. Olatte, L. Carvajal, R.L. Mannheim and J.L. Garin.....	329
Metallic powder elaborated by deposition on micrometric granular substrates L. Kocon, J.C. Joubert, G. le Blevennec and S. Lorthioir.....	333
Elaboration de superalliage par dispersion centrifuge dans un plasma inductif J. Coutiere, F. Folio et A. Lacour.....	337
Solidified microstructure of powders produced by various type of atomization K. Halada, K. Minagawa and H. Suga.....	341

Prediction of the powder particles structure formed during solidification in the process of metal atomization V.V. Sobolev, J.M. Guilemany and A.J. Martin.....	345
A hybrid model of a gas-metal atomizer and its application to the development of a knowledge-based control system P.I. Espina, S.A. Osella, S.D. Ridder, F.S. Biancaniello and G.E. Mattingly.....	349
The atomisation of electronic grade solder powder J.J. Dunkley.....	353
Atomization of melted aluminium using the three fluids method Gh. Matei and D. Matei.....	357
Capabilities of the electromagnetic swirl atomizer for super-alloys powder production J.C. Gasser and Ph. Marty.....	361
Preparation of monosized spherical powders of Pb-Sn alloy by pulsated orifice injection method A. Kawasaki, R. Watanabe and Y. Kuroki.....	365
Producing of ferrous and alloyed powders by combined reduction of metallurgical scale P.N. Ostrik, M.M. Gasik and A.A. Popov.....	369
A new process for preparing microcrystallites: the solvothermal synthesis G. Demazeau, A. Largeau, S.F. Matar, A. Wang, T. Dubois, E. Verdon and M. Devalette.....	373
Production and properties of titanium powders using HDH-method E. Bobrová.....	379
Improved process technology for the production of high compressibility atomized iron powders with consistent quality K. Higuchi, I. Nonaka, T. Minegishi, T. Oiyama and K. Komamura.....	383
Progress in atomizing high melting intermetallic titanium based alloys by means of a novel plasma melting induction guiding gas atomization facility (PIGA) R. Gerling, F.P. Schimansky and R. Wagner.....	387
Correlation of particle size distribution with process parameters of a gas-metal atomizer S.A. Osella, P.I. Espina, S.D. Ridder, F.S. Biancaniello and G.E. Mattingly.....	391
Purification de poudres réfractaires par plasma inductif : application au titane J.P. Paillard, P. Rivat, J. Hamburger et Ch. Garnier.....	395
A novel setup for producing RS TiAl-base alloy powders X. Qu, B. Huang, C. Lei, F. Yang, S. Chen and J. Wen.....	399
The role of powder surface state in high alloy PM materials T. Tunberg and L. Nyborg.....	403
In-house homogeneous powder mixing and its control J.A. Bas, J. Peñafiel and P. Molera.....	407
Improved blending technique reduces dimensional scatter of sintered components E. Jacobsson, P. Skoglund and M. Larsson.....	411

Electro slag heating (ESH) in powder processing sets a new performance level for PM tool steels C. Tronberg and B.-O. Bengtsson.....	415
Optimisation of hydrogen annealing processes B. Bondarenko.....	419
Miscellaneous	
Powder processing education for the year 2000 K. Vedula, K.P. Constant and J. Hudgens.....	425
Ceramics	
Bulk production of ceramic superconductors through PM-route A. Choudhury.....	431
Sintering of Al ₂ O ₃ /Mn-Fe-Si/Mo composites in a controlled hydrogen atmosphere T. Kulesza.....	437
Use of gel-like silicates in powder metallurgy S.Y. Maxunov.....	441
Ceramic processes: some new trends P. Boch.....	445
Fabrication of mixed oxide electrodes by PM techniques C.O. Augustin, L.K. Srinivasan and U. Sen.....	449
Composites	
PM high speed steels reinforced with NbC W.C. Zapata, C.E. da Costa and J.M. Torralba.....	455
High speed steel matrix composites with TiC and TiN additions M.M. Oliveira and J.D. Bolton.....	459
Mechanosynthesis and consolidation by hot isostatic presson of Fe/Fe ₃ C nanocomposites P. Matteazzi, D. Basset, M.D. Alcalà, G. Le Caër and S. Begin-Colin.....	463
Pressing and sintering of MMC wearparts J.-O. Lindqvist.....	467
Formation of oxide during processing of a composite superalloy N. Caspersen and O. Kraemer.....	471
Wear of P/M MMC for wood cutting applications J. Bendixen and O. Kræmer.....	475
Dense homogeneous nickel base alloys and composites via supertransient liquid phase sintering J. Kinstler, U. Avner, Y. Sheffer and E.Y. Gutmanas.....	479
Wet powder spraying (WPS) - a new PM-route for processing fiber-reinforced MMC's M. Fübi, H.-P. Buchkremer and D. Stöver.....	483
Fusion tungsten carbide particulate reinforced metal matrix composites for abrasion and wear applications V. Constantinescu and R. Orban.....	487

Manufacturing of TiAl-MMC by the elemental powder route Th. Jüngling, I. Morgenthal and B. Kieback.....	491
Metal-polymer particulate composites: mechanical behaviour and interface characterization M. Laoufi, J.M. Lefebvre, C. Depecker, B. Escaig and L. Ackermann.....	495
Metallic-fibre-reinforced ceramic-matrix composite F. Prévost, G. Schnedecker and M. Boncoeur.....	497
Dispersion Strengthened Metals	
Strengthening of metallic matrix by ultradispersional oxide phase E.P. Danelia and M.I. Doperchouk.....	503
Textures and recrystallisation of cold-worked O.D.S. ferritic alloys H. Regle and A. Alamo.....	507
Manufacturing and properties of dispersion-strengthened Cu-materials with nanocrystalline strengthening particles G. Lotze and G. Stephani.....	511
Preparation and properties of dispersion hardened Cu-Al ₂ O ₃ material E. Bobrová and M. Besterčí.....	515
High temperature behavior of ODS copper P/M alloys Ph. Dupeyrat, M.F. Beaufort and M. Grosbras.....	519
Probabilistic model of the sintering and failure of composites with high content of hard filler L.L. Mishnaevsky.....	523
Mechanical properties and recrystallisation behaviour of Fe base ODS alloys J. Lecomte-Beckers, D. Coutsouradis, Ch. Lecomte-Mertens and B. Kazimerzak.....	527
Synthesis of titanium aluminides using TiH ₂ and Al powders O.M. Ivasishin, A.N. Demidik, V.M. Prozorov and D.G. Sawakin.....	531
Grain shape development in iron based ODS alloys made by mechanical alloying D.M. Jaeger and A.R. Jones.....	535
Creep mechanisms in oxide dispersion strengthened alloys elaborated by mechanical alloying C. Zakine, C. Prioul, A. Alamo and D. Francois.....	539
Changes in precipitates and dispersed particles during heat treatment in a mechanically alloyed Ni base super alloy K. Murakami, H. Harada and H.K.D.H. Bhadeshia.....	543
Microstructure and properties of dispersion hardened Cu-Ti P/M alloys Ch. Sauer, W. Püsche and G. Petzow.....	547
Multimaterials, Gradient Materials	
Design and fabrication of diamond tools with ceramic shank using the concept of functionally gradient materials J.-F. Li, R. Watanabe, N. Nishio and A. Kawasaki.....	553
Realization by hiping of dual material rotating parts in nickel base superalloys G. Raïsson, O. Faral, V. Samarov and E. Kratt.....	557
Structured PM wear resistant coatings G.F. Archer and D.J. Stephenson.....	563

Powder processing of PSZ-chrome/nickel graded materials characterization - thermal properties N. Cherradi, K. Dollmeier and B. Ilschner.....	567
--	-----

Porosity, Porous Materials

Highly porous materials and parts by P/M technology H.D. Kunze.....	573
Fibre metallurgy revisited R. de Bruyne.....	581
Selected mechanical and physical properties of metal foams M. Weber, J. Baumeister, J. Banhart and H.-D. Kunze.....	585
Systèmes poreux armés. Caractéristiques mécaniques et technologiques L. Brândusan.....	589
Iron based oil filters with improved penetrability K.K. Shugay, V.N. Varavka and Y.A. Gordin.....	593
Preparation and characterization of zirconium porous getters A.R.M. Castro, F.A. Filho, L.F.C.P. de Lima, M.S. Gorski and O.C. de Souza Ribeiro.....	597
New concept of pore shape and size influence on endurance limit of sintered materials B. Kubicki and V. Sundhar.....	601
Properties of porous parts with layer and gradient structure produced by centrifugal powder metallurgy M. Joensson and P. Neumann.....	605
Methods for the production of metallic foams J. Baumeister, J. Banhart, M. Weber and H.-D. Kunze.....	609

Tribology and Materials

The role of powder metallurgy in the development of self-lubricating bearing materials V. Dufek.....	615
MoS ₂ -alloyed steel for wear-loaded parts F. Vollertsen and M. Geiger.....	621
Damage evolution during wear of nitrided sintered steels A. Molinari, G. Straffelini, B. Tesi and T. Bacci.....	625
Features of composite plain bearings making K.K. Shugay, Y.A. Gordin, V.G. Ljulko and A. Al-Hajuny.....	629
Studies of Si ₃ N ₄ - and sialon-based ceramics wear under friction against different types of steels A. Kovaltchenko, I. Osipova and R. Voitovich.....	633
Studies of some diffusion processes in iron-based composite friction materials A. Storin, P. Nita, C. Bunesco and G. Petre.....	637
Sintered friction materials obtained from industrial waste St. Gavriliu, E. Cristescu, E. Enescu and E. Soptea.....	641
Wear resistant PM aluminium materials by a press and sinter route C.G. Purnell and P. Smith.....	645

Wear testing of sintered cam lobes in low alloy powder metallurgical steel P. Maulik and A.D. Pope.....	649
Friction and wear behaviours of LgSn ₈₀ in superficial-contact sliding against plasma-sprayed Cr ₂ O ₃ coating J.E. Fernández, H.J. Montes, Y. Wang and R. Vijande.....	653
Wear resistance of P/M materials and its dependency on surface topography P. Kjeldsteen.....	657
Compacting - Modeling	
Numerical simulation of die pressing and sintering - development of constitutive equations H. Riedel, J. Svoboda and H. Zipse.....	663
Pressure, friction and density during axial powder compaction E. Ernst and D. Barnekow.....	673
Rheological characterization of metal powder following various loading paths P. Mosbah, D. Bouvard, J. Lanier, E. Ouedraogo and P. Stutz.....	677
3-D simulation of powder characteristics and compaction behaviour S. Shima and H. Kotera.....	681
Modelling of cold compaction process of metal powders M.D. Riera and J.M. Prado.....	685
Finite element modelling of powder compaction and its experimental validation D.T. Gethin and R.W. Lewis.....	689
Material parameter fitting in an integrated environment for analysis of iron powder pressing M. Oldenburg and H.-Å. Häggblad.....	693
To continuum simulation of consolidation in porous media E. Olevsky.....	697
Consolidation model of powder magnetic materials L.A. Barkov, P.A. Cheskidov, V.I. Truskovskii and V.K. Plotnikov.....	701
Finite element simulation of HIPing L.A. Barkov, P.A. Cheskidov and G.A. Kuznetsov.....	705
Cold compaction of iron powder: experiments and simulation G. Coccoz, M. Bellet, R. Lécot, L. Ackermann and H.-Å. Häggblad.....	709
A micromechanical model of multiaxial powder densification C.D. Turner.....	713
Computer simulation of porous refractory metals behaviour in four-sided rolling L.A. Barkov, Yu.I. Kamenshchikov, S.A. Mymrin, S.A. Leonov and A.V. Clyschko.....	717
Nonuniformity of the densification under the HIP-process A. Maximenko, M. Shtern, J. Ivlev, J. Panfilov, W. Eisen and E. Olevsky.....	721
Numerical simulation of hot isostatic pressing of metal powder: influence of constitutive equations C. Argento, D. Bouvard, P. Stutz, R. Charlier and A.M. Habraken.....	725
Densification of powder composites: effect of inclusion angularity F. Delie, C. Dellis and D. Bouvard.....	729

XVIII

High pressure triaxial apparatus for investigating the mechanical behaviour of metal powders P. Dorémus, C. Geindreau, A. Martin, R. Lécot and M. Dao.....	733
New pressing equation L. Parilák and E. Dudrová.....	737
Friction on punch faces and its effects on the Green density of P/M parts G.F. Bocchini.....	741
Friction and boundary layer effects on the apparent compressibility of iron powders determined on thin disks G.F. Bocchini, V. Fontanari and A. Molinari.....	745
Analytical and experimental method of prediction of the densification kinetics for HIP A.P. Matveykov and Yu.I. Ponomaryov.....	749
Powder pressing design analysis by the granular model simulation S. Tamura, T. Mitsuno and T. Aizawa.....	753
The role of contact-contact interaction in the densification of powders A.R. Akisanya, A.C.F. Cocks and N.A. Fleck.....	757
Finite element simulation of near net shape parts produced by hot isostatic pressing M. Khazami-Zadeh, D.G. Seliverstov, F. Petzoldt and H.-D. Kunze.....	761
Cold forging of sintered square metal powder plate G. Sutradhar, A.K. Jha and S. Kumar.....	765
HIP modeling of complex shape parts: experience, trends and perspectives D.G. Seliverstov and V.N. Samarov.....	771
Effect of the state of stress and cold plastic deformation on the consolidation process of porous materials F. Grosman and J. Lukowski.....	775
Model for densification and grain growth of porous alumina Y.S. Kwon and K.T. Kim.....	779
Modeling of consolidation for near-net shape processing T.F. Zahrah, F. Charron and L. Christodoulou.....	783
Modeling powder consolidation processes using the unit problem approach H. Li, S. Saigal, P.T. Wang and H.R. Piehler.....	789
A three-dimensional finite element simulation of hot powder forging of a automotive part A.G.K. Jinka, M. Bellet and L. Fourment.....	793
Numerical modelling of near-net-shape HIPing of TA6V powder D. Abondance, R. Baccino, F. Bernier, F. Moret, J.M. de Monicault, D. Guichard, P. Stutz and D. Bouvard.....	797
Thermomechanical analysis of metal powder hot isostatic pressing process by the finite element method A.G.K. Jinka and R.W. Lewis.....	801
Author Index for Volume I.....	805
