

Energetics of alloys	p. 3
Crystal structure and phase stability in Fe _{1-x} Co _x from ab initio theory	p. 13
Ab initio study of phase stability and equation of state of titanium dioxide	p. 19
Augmented space recursive approach for alloy phase stability	p. 25
Experimental study of the short-range order in the Pt-V system: effective pair interactions as a function of the concentration	p. 31
Analysis of the effective interatomic interactions in metallic alloys	p. 39
Application of continuous displacement treatment of CVM to binary alloy systems	p. 45
Structural Stability in Fe-based Alloys	p. 57
Augmented space recursion method for the calculation of electronic structure of random alloys	p. 63
The Vienna ab-initio simulation program VASP: An efficient and versatile tool for studying the structural, dynamic, and electronic properties of materials	p. 69
Configurational kinetics studied by PPM	p. 83
The martensitic transformation in FeNi alloys: a molecular dynamics study	p. 95
Kinetics of early stages of phase transformations in metallic alloys	p. 101
Total energy calculations of alloys: locally self-consistent Green's function method	p. 115
Roughening of an antiphase boundary near a bulk first order transition	p. 121
Effective pair interactions in random alloys by direct configuration averaging	p. 129
Theory of surface segregation: self-consistent determination of the concentration profile	p. 133
Calculation of the electronic structure of antiferromagnetic chromium with a sinusoidal spin density wave by the method of Dirac function linear combination	p. 139
Dynamical properties of Au adatoms on low index Cu faces by molecular dynamics simulation	p. 151
NMR spectroscopic investigations of surface and interlayer species on minerals, clays and other oxides	p. 157
Sonochemical synthesis of amorphous bimetallic Fe-Ni alloys	p. 169
Electron energy loss spectroscopy as a tool to probe the electronic structure in intermetallic alloys	p. 175
Alloying aspects of the magnetic ground state and anisotropy of Fe/Cu thin film overlayers	p. 181
Magnetic dichroism in valence band X-ray photoemission spectroscopy	p. 187
Electronic structure and bonding properties of Ti ₅ Si ₃	p. 191
Polymeric alloys: model materials for the understanding of the statistical thermodynamics of mixtures	p. 197
Investigation of ordering kinetics in deformed and annealed Cu ₃ Au	p. 207
Ab initio investigations of phonon anomalies and martensitic transformations	p. 213
Investigation of ordering kinetics in alloys by residual resistometry	p. 219
Improved LMTO-ASA methods Part II: total energy	p. 233
Effects of interface intermixing on the magnetic interlayer coupling	p. 239

Relativistic calculations of photoemission- and LEED-intensities for ordered and disordered alloys: application to Cu ₃ Pt and Cu ₅ Pt ₃	p. 245
Application of a new tight-binding total energy method to 4-d transition metals and compounds	p. 253
Study of magnetic clusters using a tight-binding molecular dynamics approach	p. 261
Electrical conductivity of inhomogeneous systems: Application to magnetic multilayers and giant magnetoresistance	p. 267
Ab initio molecular dynamics simulations of liquid alloys: network formation, structure factors and electrical conductivity of NaSn alloy	p. 277
Investigation of galvanomagnetic properties of transition metal alloy systems using the Kubo-Greenwood equation	p. 283
Bulk metallic glass formation in the Pd-Ni-P and Pd-Cu-P alloy systems	p. 287
Electronic topological transitions and compositional order in CuPd and CuPt alloys	p. 301
Structure and deformation of Al-rich TiAl single crystals	p. 309
Experimental studies on precursor phenomena in displacive phase transformations	p. 321
Pre-transformation lattice strain anisotropy and "central peak" scattering	p. 333
Calculating grain boundary energies and other defect energies in ordered alloys	p. 339
Atomistic study of structure and mobility of dislocations in NiAl	p. 349
Atomic structure and properties of dislocations and interfaces in two-phase TiAl compounds	p. 355
A simple approach to the energetics of surface defects in transition metals	p. 371
Stacking fault energies in Al-based alloys	p. 383
Chemical bonding and elastic properties of nickel-based intermetallics	p. 389
The microstructure and martensitic transformation in a (potentially) shape-memory Ni-Al-Ti-B alloy	p. 397
Texture and structure of superplastically deformed AlZn base alloys	p. 403
Effect of liquid phase on superplasticity at high strain rates in metals and their composites	p. 415
Hydrogen as a useful alloying element in Titanium alloys	p. 425
A KKR and KKR-CPA code for any Bravais lattice	p. 441
Full multiple scattering calculations on HgTe under high pressure at the mercury L ₃ X-ray absorption edge	p. 447
Semi-relativistic multiple scattering theory	p. 451
Spin and orbital polarized relativistic multiple scattering theory	p. 457
Multiple scattering theory applied to XMCD spectra in molecule-based magnets	p. 461
Multiple scattering theory for substitutional electromigration	p. 467
The charge on a single impurity in a metal	p. 479
Free Green function for overlapping spheres	p. 485
Chairpersons/Organizers of IAC-1	p. 491
Executive Committee	p. 492
International Scientific Committee	p. 493
Participants Photo	p. 496
List of Participants	p. 499
